AB	The present invention relates to a method for the sustained release in vivo of a biol. active agent comprising administering to a subject in need of treatment an effective amount of a sustained-release composition comprising			
a	biocompatible polymer having the biol. active agent incorporated therein, and a bisphosphonate wherein the bisphosphonate compound is present in an amount sufficient to modify the release profile of the biol. active agent from the sustained-release composition Pharmaceutical compns. suitable for use in the method of the invention are also disclosed.
